Spacecraft Operations Engineering

Support mission operations through Launch + 14 months by providing:

- **Flight operations systems engineering**
- **Spacecraft to ground system interface engineering**
- **Spacecraft operations documentation**
- **Engineering support to FOT for:**
 - **Procedure and display development**
 - **Training and simulations**
 - **Performance analysis and verification**
- **On-site support at GSFC beginning in 1998**
- **Off-site support by LMMS through Launch + 14 months**

Spacecraft Operations Development Schedule

Spacecraft Operations Documentation

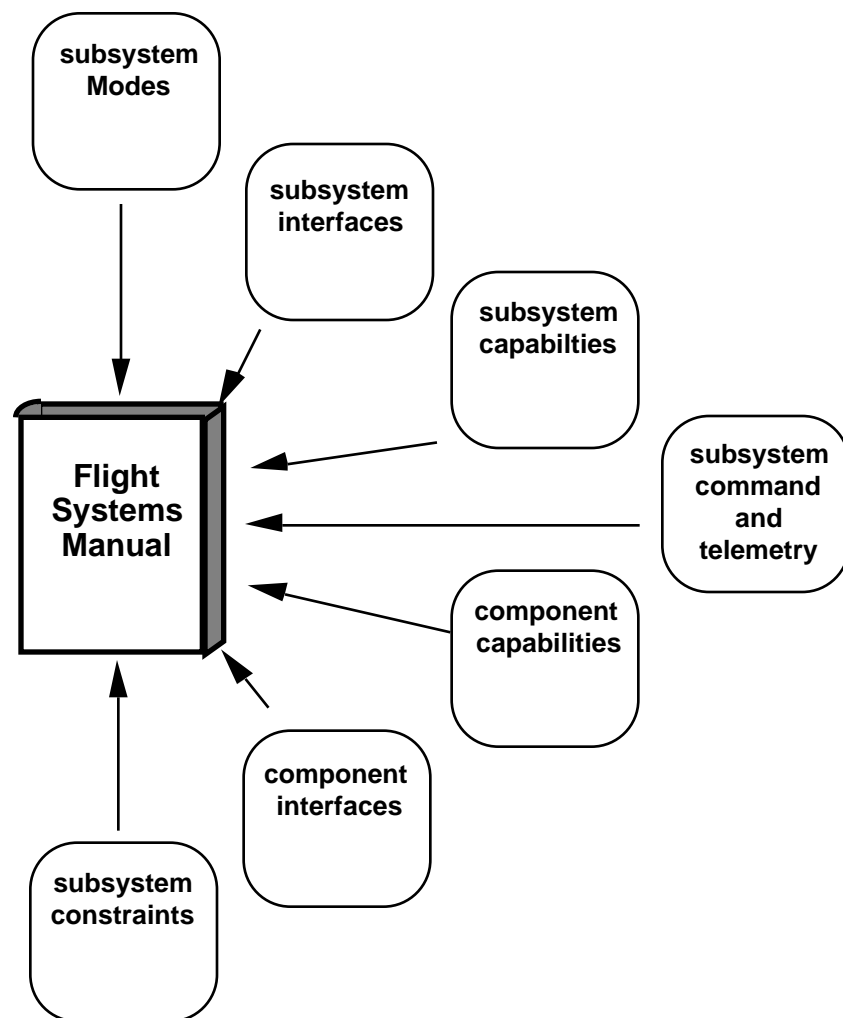

EOS AM-1 Spacecraft Operations Documentation:

- **Operations Concept**
- **Flight Systems Manual**
- **Flight System Plan**
- **Flight System Operations Manual**
- **On-Orbit Operations Manual**
- **Flight Software Users Guide**
- **Instrument Operations ICDs**
- **Command and Telemetry definitions**
- **Spacecraft Trend Parameters/ Limited Life Items List**
- **FOT Training Materials**

Flight Systems Manual

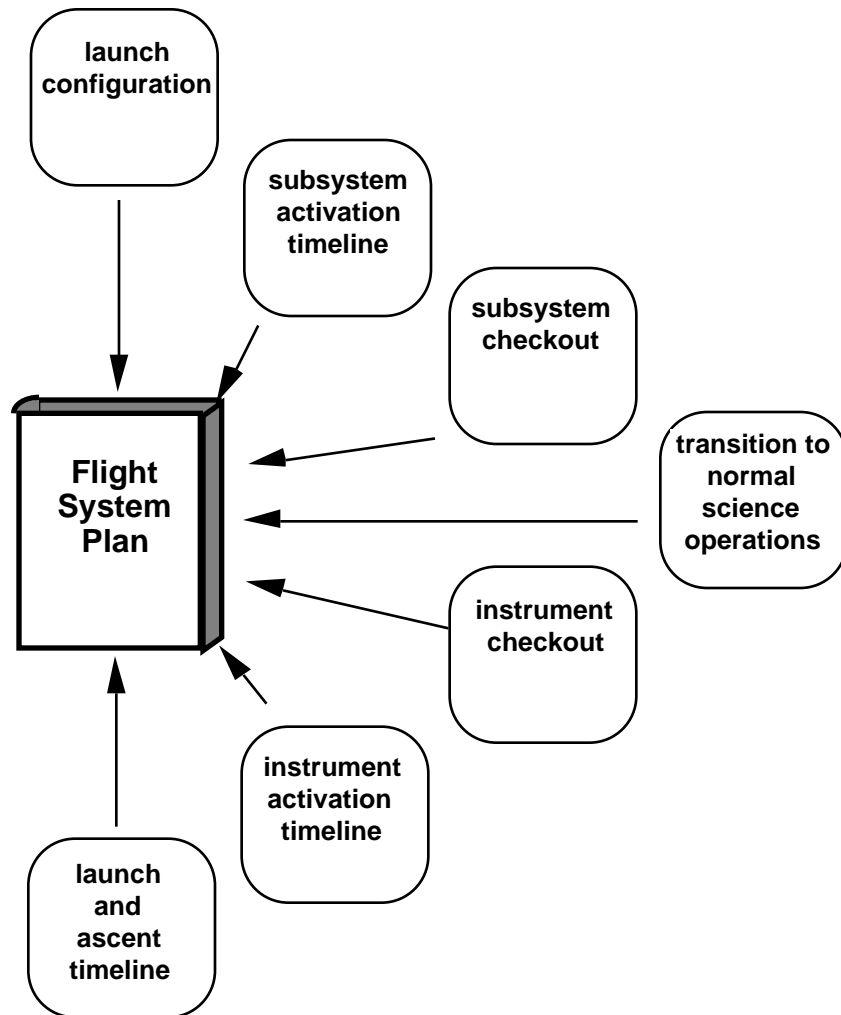

**Delivered August 1996, update
November 1997**

**Describes the design and
capabilities of the AM-1 subsystems**

- **Configuration and modes**
- **Component design(s)**
- **Capabilities and interfaces**
- **Command and telemetry**
- **Operations constraints**

Flight System Plan

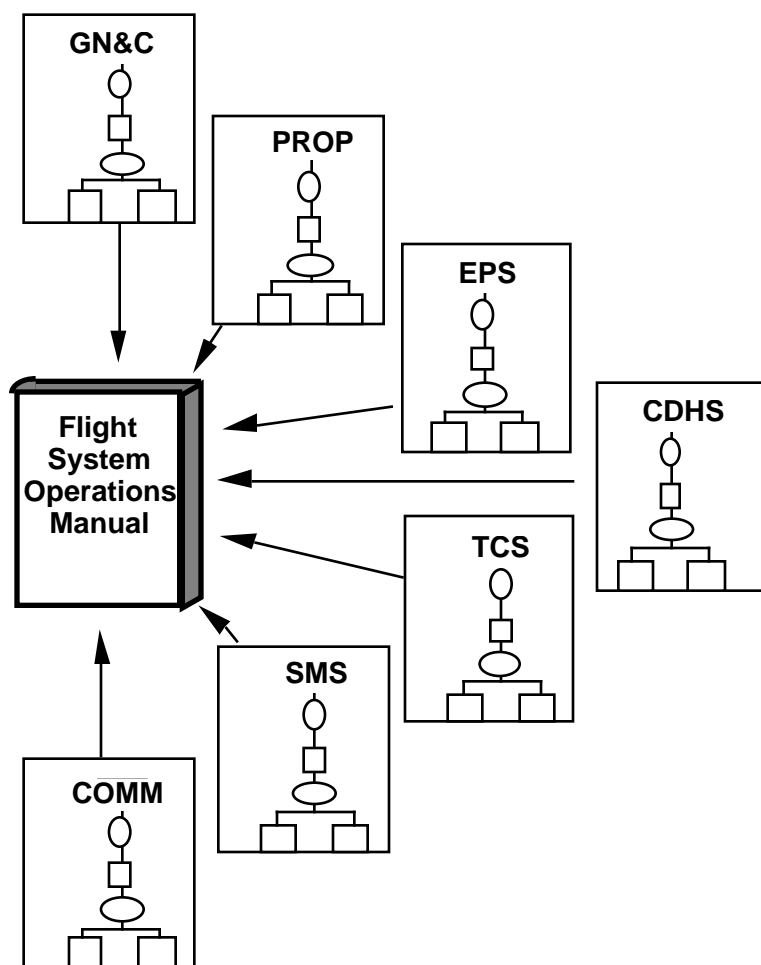

Draft November 1996, Final March 1998

Documents the AM-1 mission timeline from launch through transition to nominal science operations

- Mission phases
- Critical L&EO events: initial communications, earth acquisition, array and antenna deployments, mission orbit acquisition
- Spacecraft activation timeline
- Subsystem and instrument checkout plans
- Transition to normal science

Flight System Operations Manual

Draft March 1997, Final October 1997

Describes the nominal, special, and contingency operations of the AM-1 subsystems

Provides a description of each unique subsystem operation

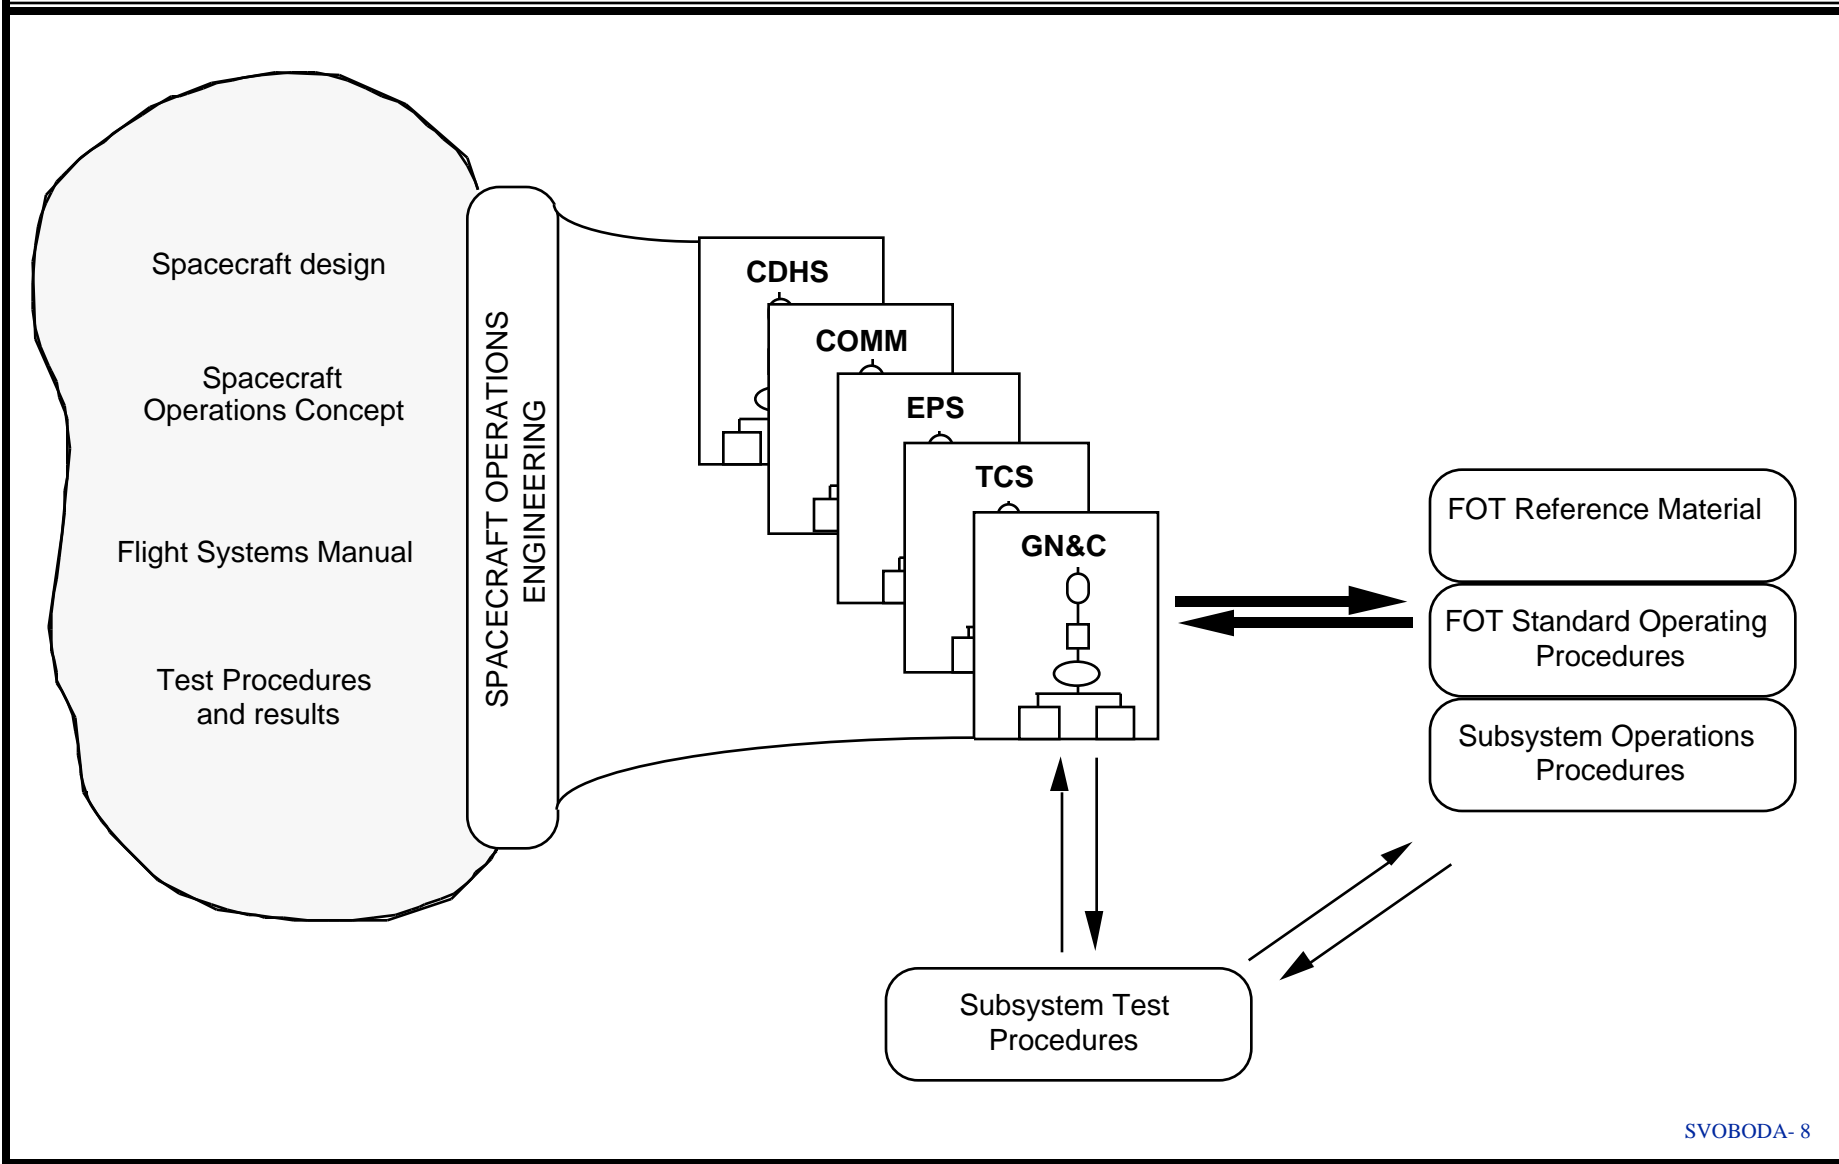

- Initial/prerequisite conditions
- Command sequence and timing
- Verification telemetry
- Final conditions

Provided to the FOT for use in developing flight Procs

Provides a list of contingency operations

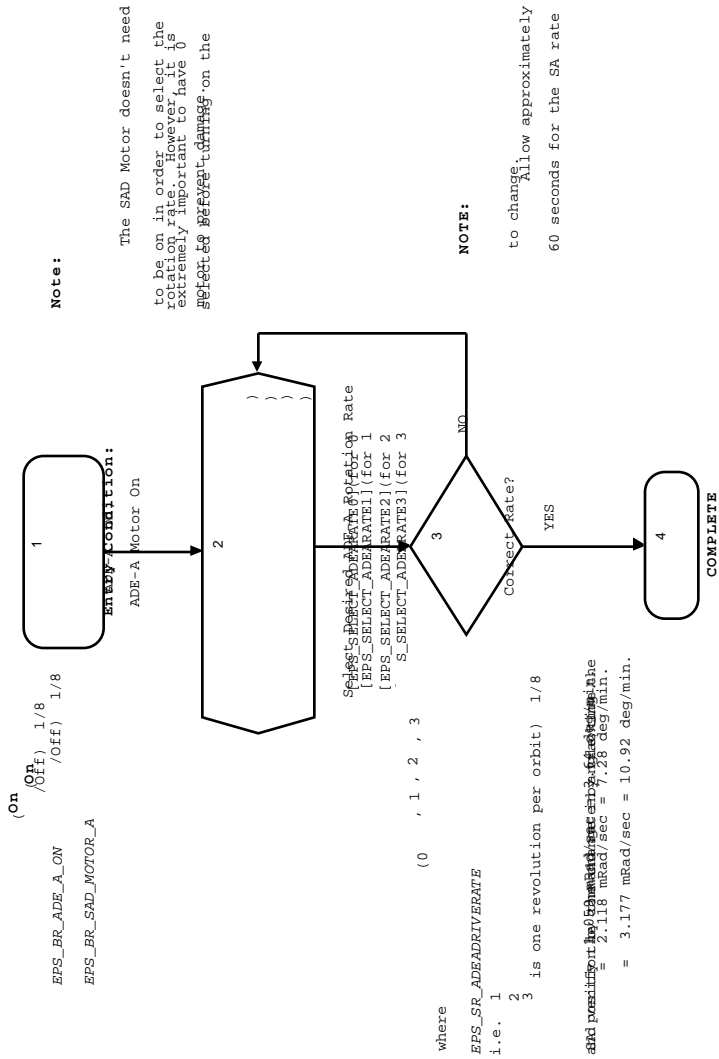

Flight System Operations Manual Development Process

Operations Flow - Example

SAA Rate Change

H&S Health and Safety
SAD Solar Array Drive
Orbital Revolution

NOTE:

Telemetry mnemonics
i.e. EPS_BR_ADE_A_ON

(On/Off) 1/8 where (/Off) is the status with the expected every master cycle.

Telemetry Italicized

are followed by the possible values (in parenthesis) and by the # of samples per master cycle for the Health and Safety/House Keeping. **DATE OF LAST REVISION: 11/04/96**

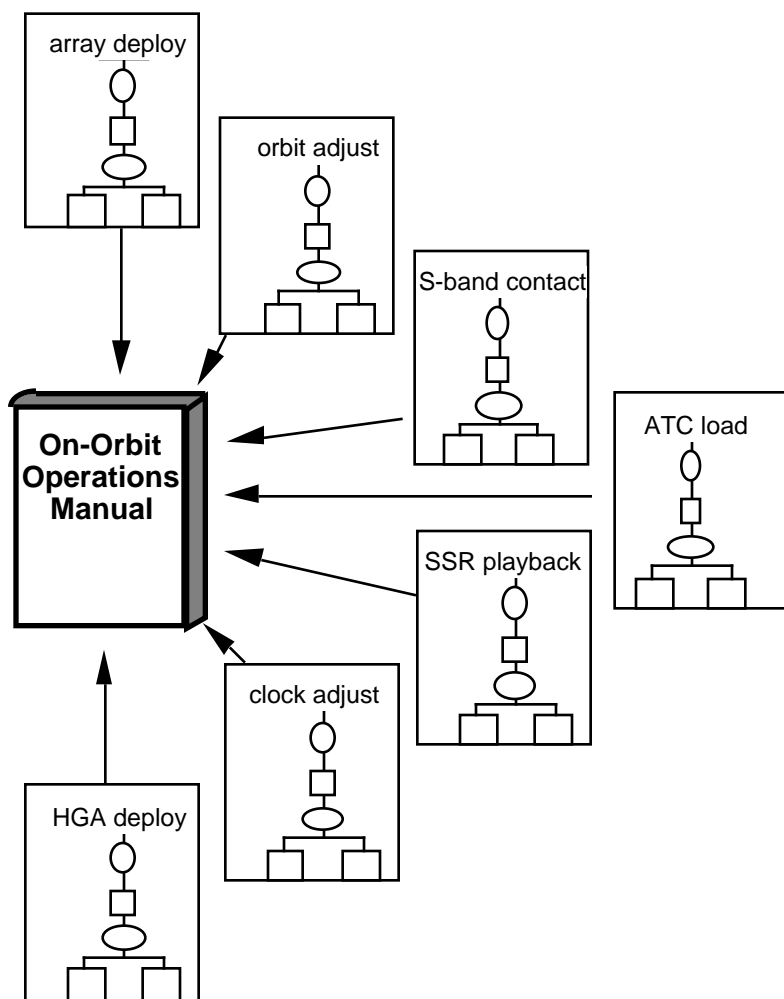

value in bold typeface and 1/8 represents 1 sample for H&S and 8 samples for the HK for

Commands = [within brackets]

REVISED BY: Eric Moyer

On-Orbit Operations Manual

**Draft November 1997, Final
April 1998**

**Provided to FOT for development of
spacecraft activities and SOPs**

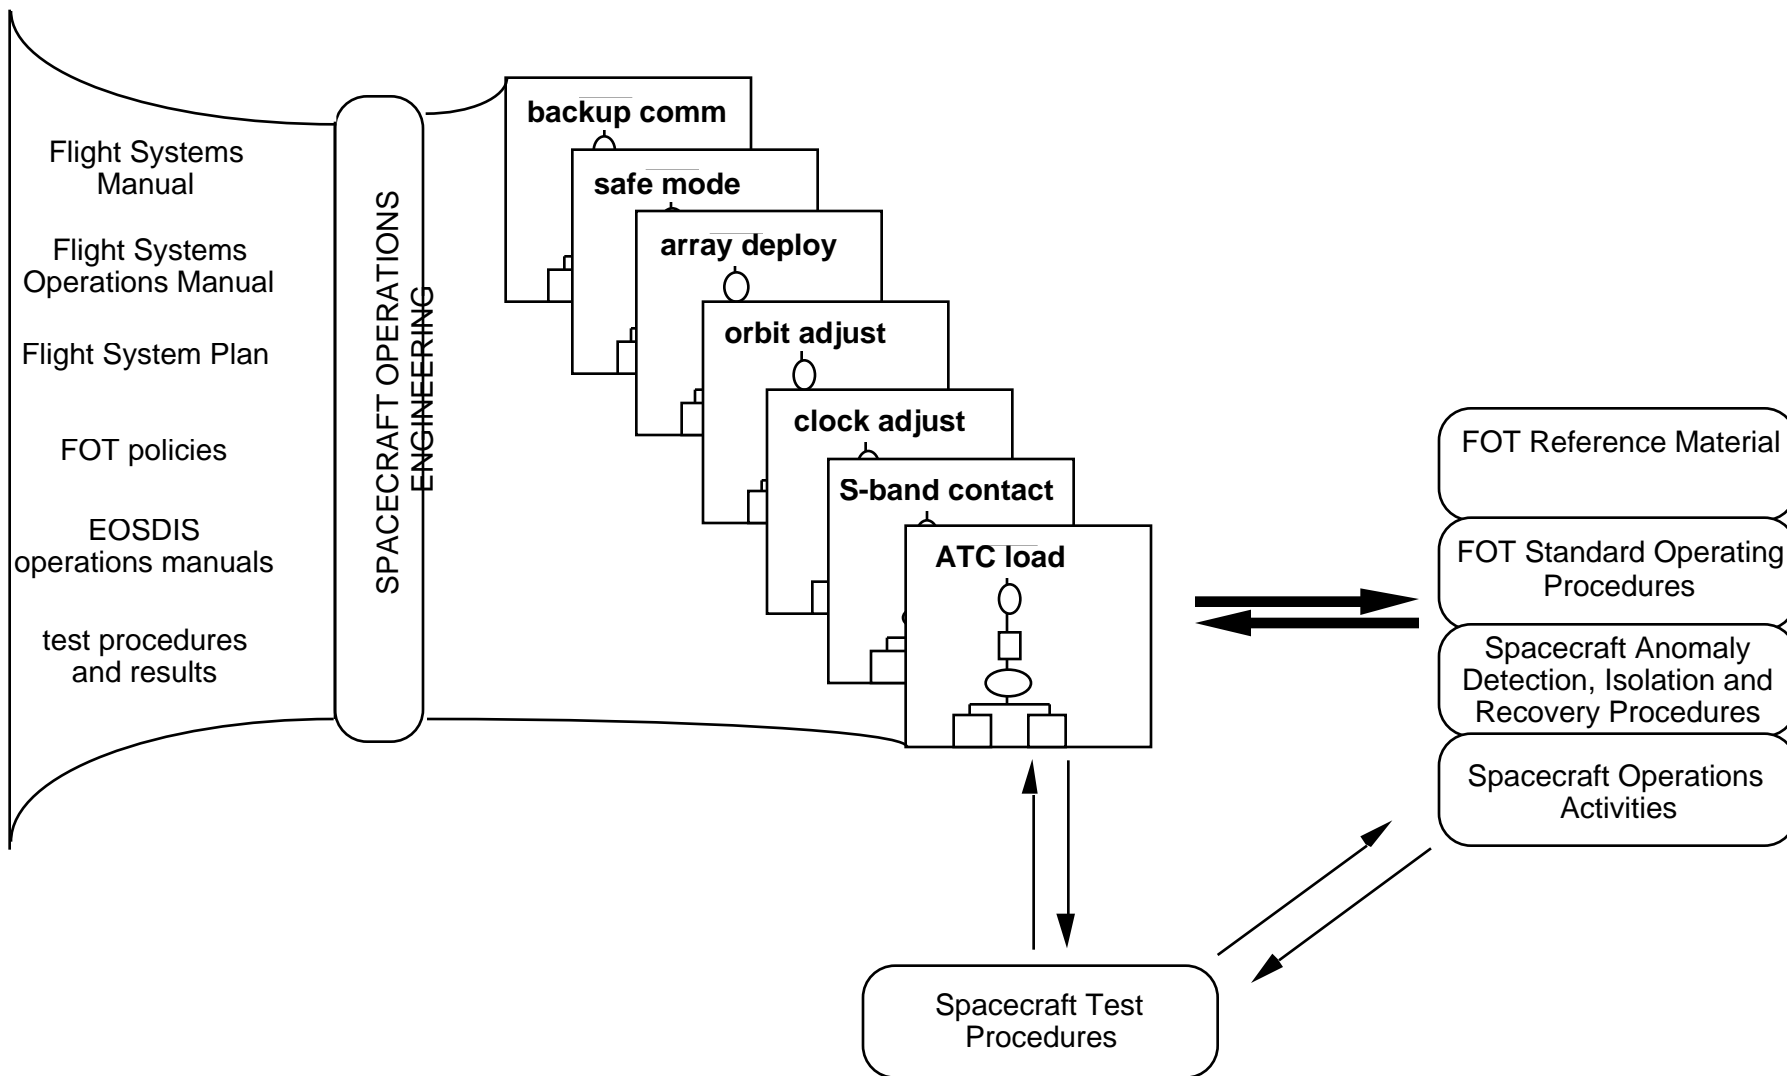

**Describes spacecraft nominal,
special, and contingency operations**

- Initial / prerequisite conditions
- Planning and scheduling requirements
- Subsystem operations sequencing and timing
- Verification requirements (telemetry monitoring and/or analysis)
- Final conditions

**Provides decision trees for fault and
anomaly detection, isolation and
recovery**

On-Orbit Operations Manual Development Process

Instrument Operations ICDs

- **Combine the Command and Telemetry ICD with the Instrument Flight Operations Understanding**
- **Documents the interface between the Instrument Operations Teams (IOT) and the FOT**
 - Roles and responsibilities
 - Standard operating procedures
 - Operational agreements
- **Describes instrument nominal, special, and contingency operations**
 - Operational characteristics and constraints
 - Command Proc, Activity, RTCS and TMON descriptions
 - Command and Telemetry definitions*
- **Signatories of the OICD include:**
 - EOS AM and ESDIS Projects
 - Instrument, Spacecraft and ECS contractors
 - Instrument PI/TL

*ASTER Command and Telemetry definition contained within a separate C&T ICD

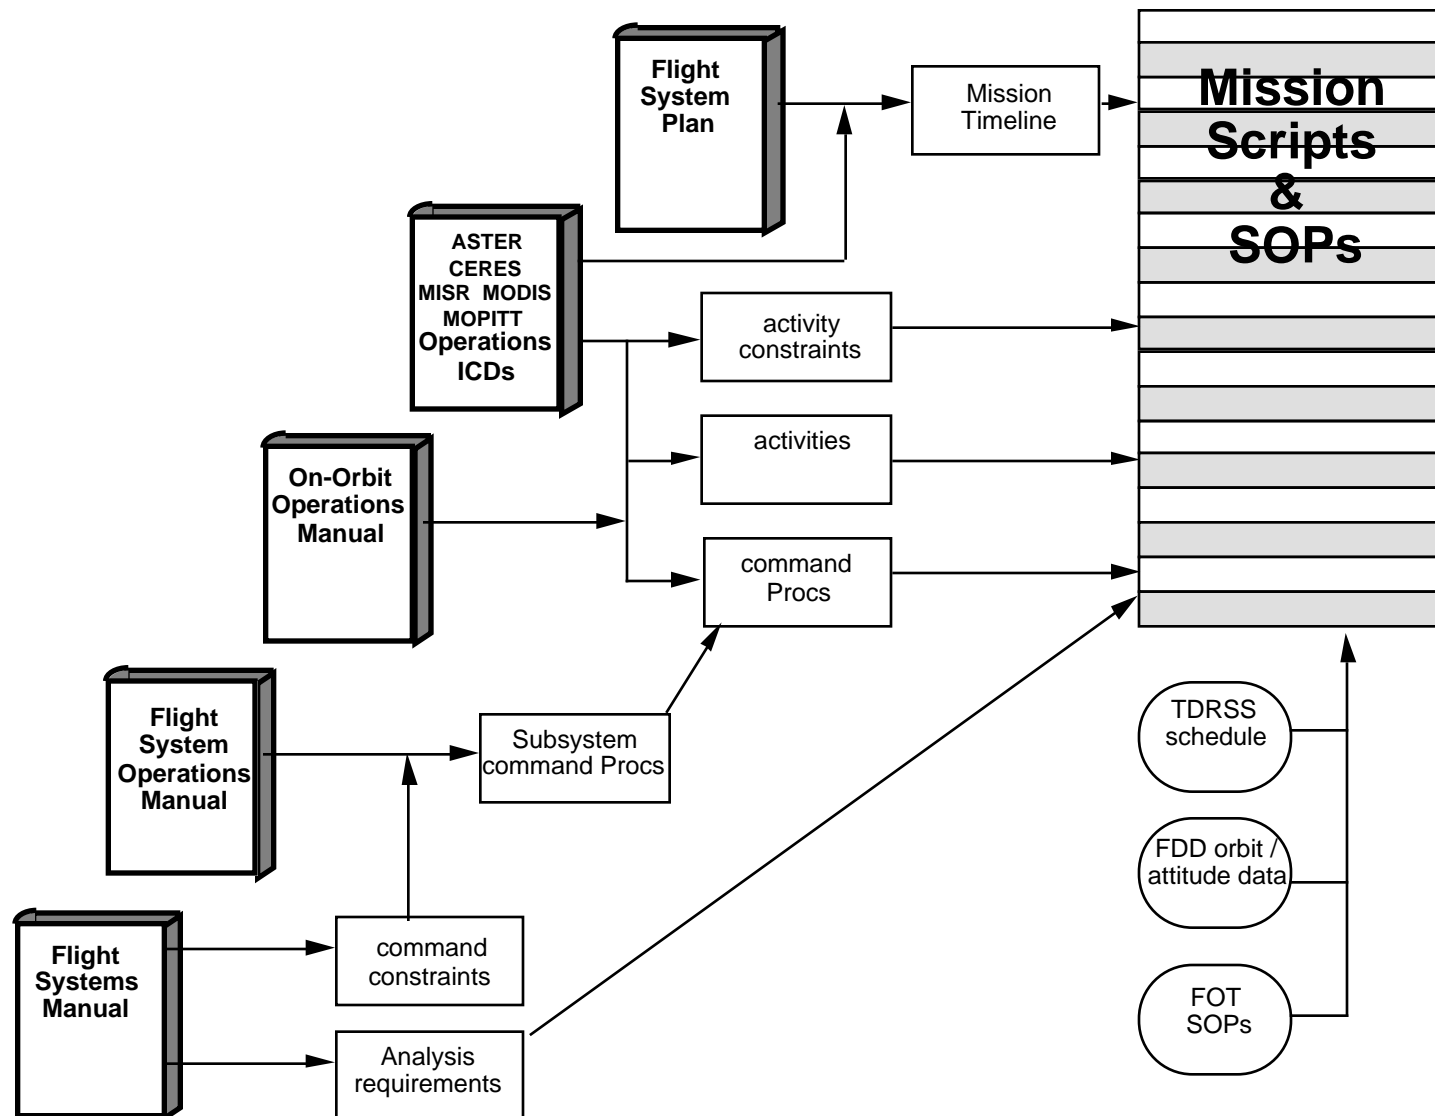

OICD Status

Instrument	Current Status	Signature
ASTER	Initial version in final update	December 1996
CERES	revision B in-process	February 1997
MISR	revision C in-process	December 1996
MODIS	revision B in-process	February 1997
MOPITT	revision A in-process	April 1997

Spacecraft Operations Documentation Development

Spacecraft Operations Tools

Spacecraft Simulator (SSIM) - July 1997

Dynamic simulation of spacecraft bus for use in training simulations and procedure validation

Spacecraft Analysis System (SAS) - January 1998

Suite of subsystem performance analysis tools for use in on-orbit performance verification and long term trending

Software Development Facility (SDF)- available now

Software and hardware tools for design, code, test, and maintain spacecraft flight software

Flight Software Tools - July 1997

Suite of tools provided to the SDF and FOT for operation of the flight software

Spacecraft Simulator

- **From FSTB**
 - CTIU and SCC (engineering models)
 - Hardware Models
 - » Deployment of SAA and HGA
 - » GN&C components (not ACE)
 - » Propulsion
 - » S-band transponder
 - Dynamic Models of the external environment, navigation and TDRS
 - Flight Software Model of Earth Acquisition control, magnetic unloading and HGA control
- **Developed for SSIM**
 - Complete telemetry responses to commands
 - Real time commanding support
 - Basic Power and Thermal Models
 - Basic ACE (Basic SHDP)
 - Standby CTIU
 - SSR & Science Formatting Equipment (SFE)

Spacecraft Analysis System

- **Developed by Subsystem and Test engineers during spacecraft integration and test**
- **Suite of subsystem performance analysis tools used for:**
 - **On-orbit calibrations**
 - » **HGA pointing**
 - » **Propellant measuring**
 - **Subsystem/component performance verification**
 - **Long term performance trending**

Software Development Facility

- **Development environment for the AM-1 Flight Software**
 - Software development tools
 - FSTB
- **Used by**
 - Software engineering for FSW development, code and test
 - Sustaining engineering for FSW maintenance
- **Home of the master FSW image through Launch + 90 days**
- **Connected with the SCS**
- **Connected with the code 512 SDVF**

Flight Software Maintenance Support

- **LMMS will retain FSW Maintenance responsibility through Launch +90 days**
- **SDF in VF will be maintained through Launch +90 days**
- **Prior to Spacecraft shipment**
 - **Software changes will be developed on the SDF in VF and transferred to the spacecraft via SCS**
 - **Deliveries of source code and executables will be made to Code 512 for the GSFC-FSTB to support IV&V and start up of software maintenance**
- **Prior to launch**
 - **Software changes will be developed on the SDF in VF and FTP'd to the SCS at Vandenberg Air Force Base (VAFB)**
 - **Changes will be delivered to the GSFC-FSTB**

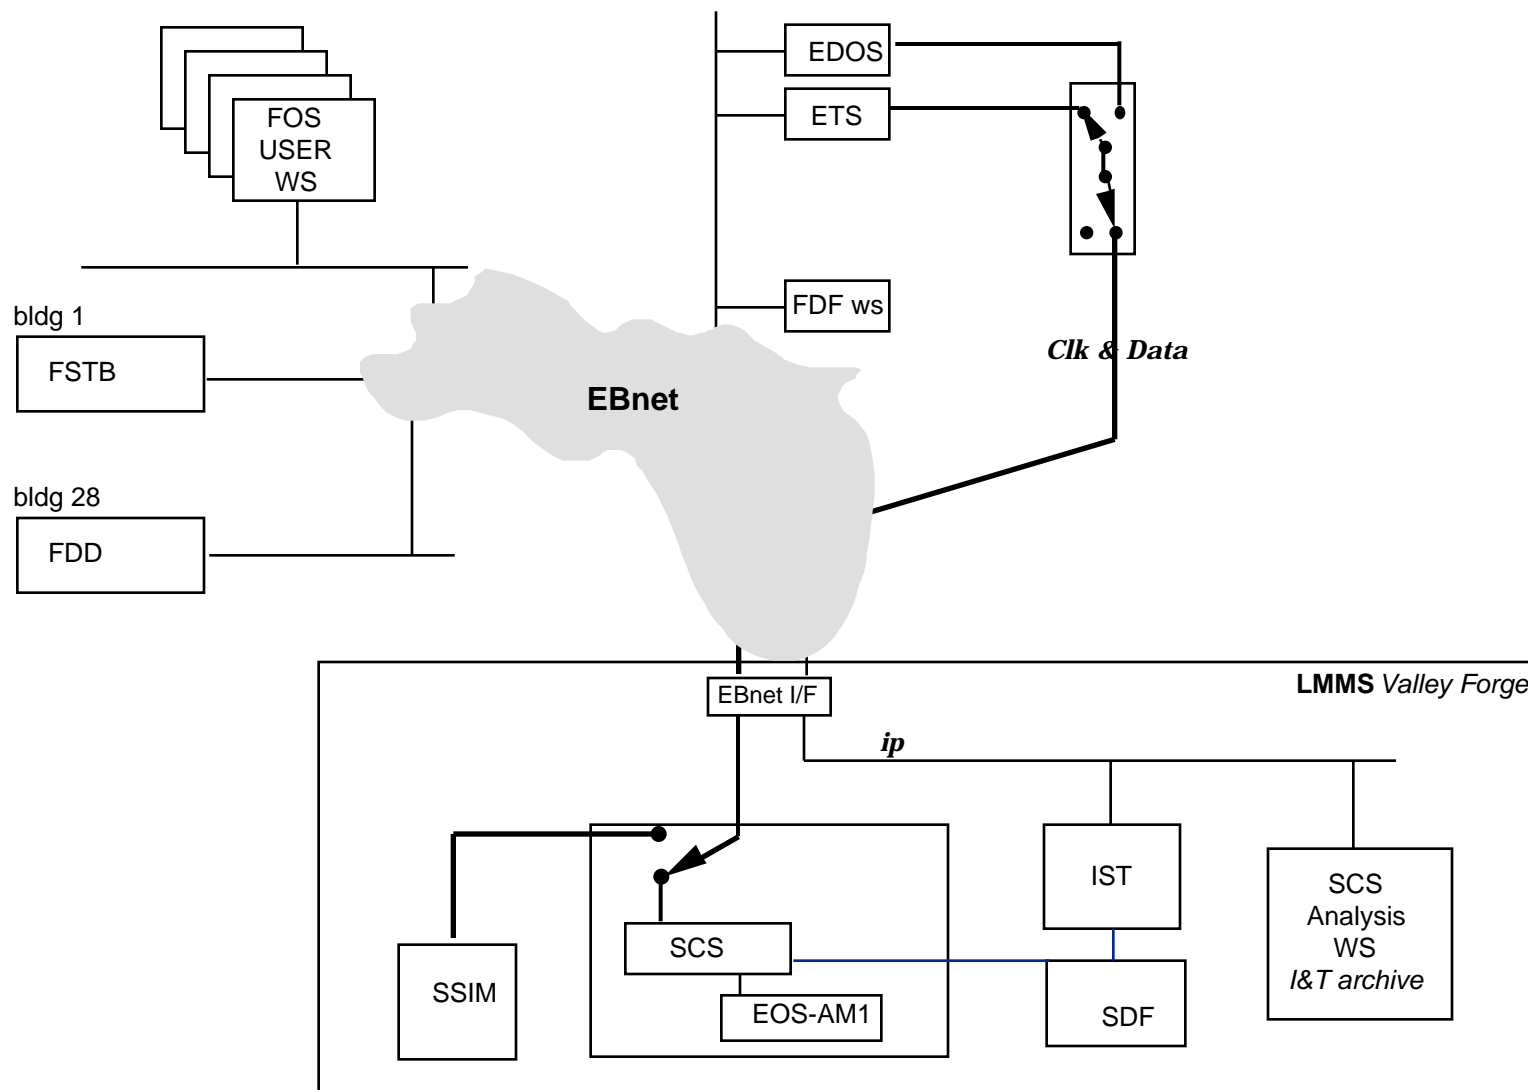

Flight Software Maintenance Support (Cont'd)

- **Post launch until 90 days**
 - Software changes will be developed on the SDF in VF and transferred to the EOC as a memory load, via the VF IS
 - In parallel, memory loads and source code changes will be transferred to the GSFC-FSTB
- **Launch +90 days**
 - Responsibility transfers to Code 512
 - Software changes will be developed on the GSFC-FSTB and transferred to the EOC as a memory load, via IST

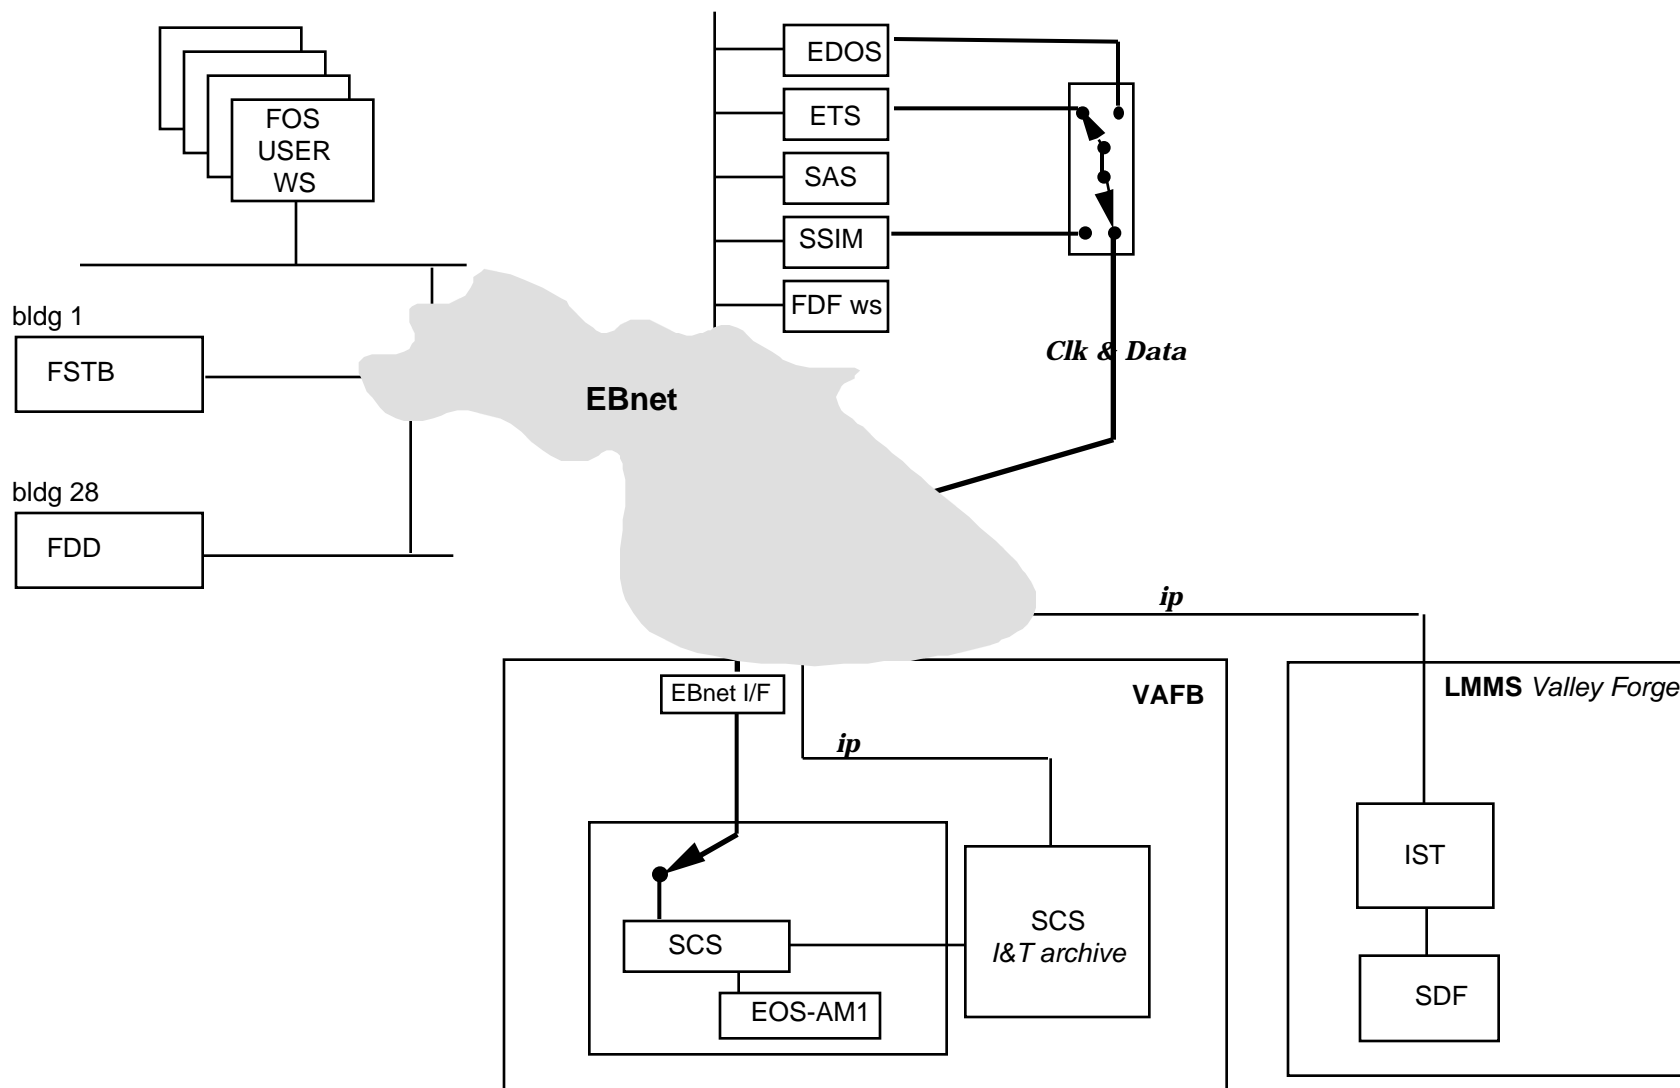

FSW Maintenance EOS AM-1 at LMMS VF

FSW Maintenance EOS AM-1 at VAFB

FSW Tools

- **TMON Builder**
- **Stored Command Load Formatter - ATC and RTCS**
- **Program Load Formatter - SCC SUROM and SCC FSW**
- **EEPROM Load Formatter - CTIU firmware and BUT**
- **Generic Table Builder - for flight software**
- **Command and Telemetry Bus table builder**
 - **BUT for CTIU**
 - **Telemetry Decom for SCC**
- **Generic cyclic redundancy check (CRC) calculator**
- **Activity Log Decoder**

FOT Training

Spacecraft Operations and Subsystem Engineering will train the FOT for operation of the EOS AM-1 spacecraft, simulator and analysis system, by providing:

- **Training materials**
 - **Presentation charts**
 - **Operations documentation**
 - **Design reference documents**
- **Lectures**
- **Tutoring in the EOC**
- **Participation in training simulations**
- **Opportunities for FOT participation in Spacecraft tests**
